WAR DEPARTMENT

SKIRMISHERS

GM 1-1

Game Manual

SKIRMISHERS

Skirmishers is a 25mm scale infantry combat game. Any models near this scale may be used; however, it is recommended to use models with a base size of 20mm or smaller, which is approximately the size of a standard US penny. Players control a squad of infantry navigating a ground combat environment. This system is setting agnostic and can be used with any miniatures and maps of the appropriate scale.

CONTENTS

These rules cover a game system overview, infantry rules, and advanced infantry rules.

DISCLAIMER

Skirmishers is a fan-made rules document. It is freely available under the Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License.

QUESTIONS AND DOWNLOADS

Skirmishers is online at https://skirmishers.jeremylt.org. The *Skirmishers* GitHub repository is at https://github.com/Eudicods/skirmishers. You can post feedback or ask questions as GitHub Issues or email skirmishers@jeremylt.org.

ACKNOWLEDGMENTS

Skirmishers would not have been possible without hours of discussion and editing on the Colorado BattleTech Discord server or the gameplay with the Denver Team at Wizard's Chest.

Editor: Jeremy L Thompson

VERSION

This document is for *Skirmishers* version 0.2-alpha, 25 February 2025.

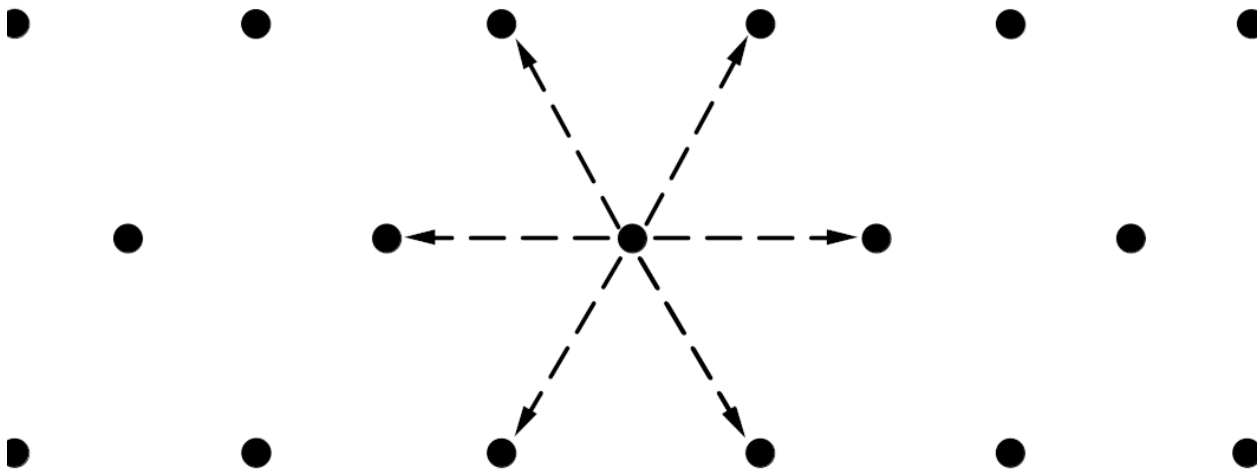
SYSTEM

This section covers the map and basic game loop.

MAP

Skirmishers uses dotted mapsheets. Dots are laid out in a hexagonal pattern, 1 inch apart, and 1 inch on the map represents 2.5 meters. Units occupy a single dot on the mapsheet and may move between adjacent dots. Models for individual units can have bases with a maximum diameter of 1 inch.



Sample Map Section

GAME LOOP

Skirmishers uses "I go, you go" (IGOUGO), with each side activating all of their units on their turn. One side randomly is chosen to start, then the the two sides alternate until the game is complete. The basic flow of the game is as follows:

1. Side 1 Activates
   (a) Remove all firing arc tokens for Side 1.
   (b) Move units one at a time. If a unit activates in or moves into an enemy's firing arc, resolve the attack immediately if the enemy unit chooses to fire.
   (c) At the end of each unit's movement, that unit may take a combat action.
   (d) After all units have moved, resolve any explosives.
2. Side 2 Activates
   (a) Remove all firing arc tokens for Side 2.
   (b) Move units one at a time. If a unit activates in or moves into an enemy's firing arc, resolve the attack immediately if the enemy unit chooses to fire.
   (c) At the end of each unit's movement, that unit may take a combat action.
   (d) After all units have moved, resolve any explosives.

INFANTRY

The basic unit in *Skirmishers* is the infantry trooper. This section covers the basic rules for standard infantry.

UNIT CARD

The unit card shows the current capabilities of a trooper and tracks damage. A unit card can be formatted in any way so long as it contains all the essential information. Below is a sample unit card for a basic infantry trooper.

Trooper: _____

Number: ____ Skill: _____

HP	10	9	8	7	6	5	4	3	2	1	0	DEAD

Squad Leader: _____ Squad: _____

Leadership: _____

Basic Regular Trooper Unit Card

Basic information about the trooper, such as their name, rank, squad position number, and skill level are tracked at the top of the unit card.

Damage to the trooper is tracked in the HP section. HP cells are labeled by their HP value, from highest to lowest, 10 to 1, from left to right. HP cells are fully crossed out when the trooper takes standard damage (X). The current HP of the trooper is given by the first cell to the right of the lowest fully marked HP cell. For example, if the trooper has HP 9, 7, and 6 marked off and HP 5 partially marked, their current HP is 5.

If the trooper is wearing armor, mark the contiguous block of HP cells protected by the armor in the Armor section. Armor must be destroyed before the corresponding HP cell is marked off.

Total action points (AP) for the trooper are given in the AP section. Use the value in the column corresponding to the trooper's current HP. For example, if the trooper has 5 HP, then they have only 7 AP.

Similarly, the modifier section tracks the current modifier for the trooper's target numbers based upon current HP. For example, if the trooper has 5 HP, then add +2 to all target numbers.

The weapons and equipment section list the primary and secondary weapons the trooper is equipped with, along with their damage values and range brackets. Basic troopers also carry 4 hand grenades and may carry additional equipment. Any rifle automatically comes with a bayonet equipped.

The leadership section lists the squad leader for the trooper and their leadership score. This section contains the information required for morale checks.

WEAPONS AND EQUIPMENT

Troopers carry one primary weapon, one secondary weapon, and 4 hand grenades. All troopers have a helmet and combat knife. The combat knife is assumed to be affixed as a bayonet if the trooper is carrying a rifle or SMG. In some cases, troopers may carry additional equipment.

Primary Weapons

Troopers may use the following primary weapons:

Weapon	Damage	Short Range	Long Range
Auto Pistol*	2X	1-7	8-20
Rifle	4X	1-27	28-75
SMG*	3X	1-17	18-25
Laser Rifle	5X	1-17	18-105
Laser SMG*	4X	1-25	26-70
Gyrojet Rifle	6X	1-57	58-180

Primary Weapons

Note, the auto pistol, SMG, and Laser SMG can fire into the same firing arc multiple times. All other weapons may only fire into a firing arc once per turn.

Secondary Weapons

Each trooper can have a maximum of 1 secondary weapon. Troopers may use the following ranged secondary weapons:

Weapon	Damage	Short Range	Long Range
Pistol	3X	1-7	8-20
Laser Pistol	4X	1-12	13-30

Ranged Secondary Weapons

Instead of a ranged secondary weapon, troopers may use the following hand to hand secondary weapons:

Weapon	Damage	Short Range	Long Range
Fists	(AP/2)\	1	-
Blackjack	5\	1	-
Club	1X, 4\	1	-
Stun Baton	8\	1	-
Bayonet/Knife	3X	1	-
Sword	4X	1	-
Vibroblade	5X	1	-

Hand to Hand Secondary Weapons

Weapon	Damage	AP Cost	Ammo	Short Range	Long Range
Satchel Charge	10X/5X/2X	3 or AP	1	AP/2	-
Hand Grenade	6X/3X/1X	AP	4	AP	-

Explosive Weapons

Explosive Weapons

Troopers may use the following explosives:

The ammo indicates how many rounds come with the weapon. The damage is given is descending order for the point of detonation, the adjacent dots, the dots 2 away from the detonation, and so on. It takes 1 AP to throw a hand grenade 1 dot, and it takes 2 AP to throw a satchel charge 1 dot.

A trooper can carry a maximum of 4 grenades in addition to their primary and secondary weapons. A satchel charge is a secondary weapon, so a trooper cannot carry a ranged or hand to hand secondary weapon if they are carrying a satchel charge.

Body Armor

Troopers may equip body armor. Body armor protects a number of contiguous cells in the armor section of the unit card. Cells protected by body armor ignore bludgeoning damage. Standard damage is marked like bludgeoning damage on the cell of body armor. The first hit with standard damage partially marks the cell (\) and the second hit fully marks the cell (X).

Armor Type	Coverage	AP Cost
Light	2	1
Basic	4	2
Heavy	6	3

Body Armor AP Costs

To equip body armor on a trooper, mark the cells covered by body armor on the unit card. Then, reduce the AP to account for the body armor. For example, with basic body armor, mark 4 contiguous cells as protected by armor and reduce all values in the AP row by 2.

MOVEMENT

Prior to any combat actions, troopers can move and take special actions.

Basic Movement

Troopers can use a maximum of 8 AP for movement. Troopers move between adjacent points on the map so long as the the new location is on valid terrain and the path between the points does not pass though an impassible obstacle, such as a solid high wall or the truck of a tree.

Movement between adjacent points with no obstructions between them costs 1 AP. Movement between adjacent points with an obstruction between costs 2 AP. Obstructions include objects that are shorter than a person, such as furniture, light vegetation, and low walls.

Troopers may only enter and exit buildings through doorways and windows. Movement between adjacent points that passes through a doorway costs 2 AP. Movement between adjacent points that passes through a window costs 4 AP; however troopers cannot voluntarily fall out of an upper story window or off of a building.

Troopers may use ladders and stairs to change levels in or on a building. Movement between levels costs 3 AP. The trooper stays on the same point when changing levels. The current level of the trooper should be tracked on the unit card or next to the miniature.

Troopers may hide behind solid obstructions, such as furniture and low walls. It costs 1 AP to crouch or go prone. It costs 2 AP to stand from a crouching or prone position. Movement while prone costs double the standard AP.

Movement Type	AP Cost
Standard	1
Obstructed	2
Through door	2
Through window	4
Change level	3
Go prone	1
Stand from prone	2
Move while prone	2x

Movement AP Costs

Special Actions

A unit may take the following special actions during their movement:

Action	AP Cost
Change Weapon	3
Exchange Equipment	6

Special Action AP Costs

A unit can only have one weapon active at a time. It costs 3 AP to change active weapons, including to change to an explosive. A unit automatically switches back to their primary weapon after using the explosive.

Units may exchange weapons or equipment. It costs 6 AP to take a weapon or equipment from another unit, including a dead or unconscious unit. A unit cannot exceed their basic carrying capabilities given on their unit card. A unit may drop weapons or equipment for 0 AP; however, any unit, friendly or enemy, may then pick up the dropped weapon or equipment.

COMBAT

After moving, troopers may use any remaining AP for combat actions, such as establishing a firing arc, engaging in hand to hand combat, or using explosives.

Firing Arcs

A unit may establish a 30 degree, 60 degree, or 150 degree firing arc by paying the corresponding AP. When establishing a firing arc, the vertex of the arc is the dot the unit is standing on and can be oriented in any direction. When an enemy unit enters the firing arc, the friendly unit may fire upon the enemy unit.

Firing Arc Size	AP Cost
30 Degrees	2
60 Degrees	4
150 Degrees	6

Firing Arc AP Costs

Resolving Fire

Note: Players resolve fire during enemy movement, which occurs during your opponent's turn.

If an enemy unit activates in or moves into a firing arc, the unit may choose to fire as long as the unit has line of sight. Draw a straight line between the enemy unit and the firing unit. Obstructions, such as furniture, light vegetation, and low walls, provide cover but do not block line of sight. Impassible obstacles, such as a solid high wall, the truck of a tree, or a unit, block line of sight.

Resolving fire is a 2D6 check with the firing unit's current active weapon. If the roll meets or exceeds the target number, the attack succeeds.

Count the number of dots in the shortest path between the firing unit and target unit to determine the range. If the weapon is in short range, the base target number is 6, and if the weapon is in long range, the base target number is 8.

Add a +1 modifier for each obstruction in the path of fire between the firing unit and the target unit, except for any obstruction between the firing unit's dot and any adjacent dots. Use a -1 modifier if the attacking unit is prone. Add a +1 modifier if the target unit is prone and greater than 1 dot away. Use a -1 modifier if the target unit is prone and 1 dot away.

Condition	Modifier
Short Range	6
Long Range	8
Cover	+1 per
Attacker Prone	-1
Target Prone	+ 1
Target Prone Adjacent	- 1

Target Number Modifiers

If the attack succeeds, roll an additional 2D6. This is the initial cell to apply damage in.

Each weapon has a damage value, which indicates how many cells to mark. Starting with the initial cell, mark off the number of cells given by the damage value of the weapon, skipping any previously marked cells. If a cell is protected by body armor, destroy the body armor instead of marking the cell. The new maximum AP immediately applies to the target unit. If this new AP value meets or exceeds the AP the target unit has spent this turn, the target unit immediately falls prone and can take no further actions.

If the weapon is not automatic (auto pistol, SMG, or laser SMG), then remove the firing arc once the firing is resolved. A unit may decide not to fire if they wish to preserve the firing arc for a future target.

Hand to Hand Combat

It costs 5 AP to make a hand to hand attack. Hand to hand combat is resolved similarly to ranged combat, and the attack is resolved during the target unit's turn. The attacking unit must have a hand to hand weapon active. The attacking unit may use an affixed bayonet or use their active weapon as a club.

Resolving hand to hand combat is a 2D6 check with the attacking unit's current active weapon. If the roll meets or exceeds the target number, the attack succeeds.

The base target number is always 4, and only modifiers for damage on the attacking trooper applies.

Standard damage is applied as above. Starting with the initial cell, mark off the number of cells given by the damage value of the weapon, skipping any previously marked cells. If a cell is protected by body armor, destroy the body armor instead of marking the cell. If the attack does bludgeoning damage, indicated by a #B, apply this damage after any standard damage. Bludgeoning damage partially marks any unmarked cell and fully marks any partially marked cells. Starting with the next cell after the last marked cell for any standard damage, partially mark off the number of cells given by the bludgeoning damage value of the weapon, skipping any previously fully marked cells. If a cell is protected by body armor, the bludgeoning damage is ignored.

Explosives

AP for attacks with explosives are given by the weapon. A thrown grenade costs 1 AP for each dot its thrown, and a thrown satchel charge costs 2 AP for each dot its thrown. Double these AP costs if the attacking unit is prone. A unit cannot set up a firing arc after using an explosive.

A unit can throw a hand grenade or satchel charge down a ladder or stairs any number of levels, or may throw a hand grenade or satchel charge up one level, at a cost of 3 AP. The unit must be standing on the stairwell or ladder to throw the explosive up a level and may be on or adjacent to the stairwell or ladder to throw the explosive down any number of levels.

Explosives are resolved similarly to ranged combat, but the attack is resolved during at the end of the attacking side's turn. Place a token at the target dot for the explosives during the unit's turn and resolve the explosive after all units on your side have activated.

Resolving explosives is a 2D6 check with the firing unit's current active explosive. If the roll meets or exceeds the target number, the attack succeeds.

The base target number is the number of AP used to throw the hand grenade or satchel charge.

Add a +1 modifier for each obstruction in the path of fire between the firing unit and the target dot, except for any obstruction between the firing unit's dot and any adjacent dots. Use a -1 modifier if the attacking unit is prone.

If the target number is met, apply damage starting at the target dot and moving outwards. Impassible obstacles, such as a solid high wall or the truck of a tree, block explosive damage. Solid obstructions such as furniture and windows also block explosive damage. Roll 2D6 for each trooper in the radius of the explosive to determine where the damage is applied.

If the target number is not met, the explosive scatters. If the line of fire is not obstructed, the explosive scatters from the target point. If the line of fire is obstructed, the explosive scatters from the closest dot along the line of fire that is before the obstruction. Roll 1D6 to determine the scatter direction, identifying one direction to correspond to a result of 1 and proceeding clockwise with the other values. Roll 1D6 to determine the scatter distance. Satchel charges only scatter 1 dot.

If the path of scatter intersects an impassible obstacle, such as a wall, stop the scatter on the last valid dot along the path of scatter. Then apply the damage as above from the scatter point.

ADVANCED INFANTRY

This section covers advanced rules for infantry, including crew served weapons, advanced explosives, advanced movement, and morale checks. These rules are optional and may be added or excluded individually.

CREWED WEAPONS

Troopers may carry a crew served weapon in place of their primary weapon.

Weapon	Damage	Crew	Short Range	Long Range
Light Machine Gun*	5X	0	1-30	31-84
Medium Machine Gun*	6X	1	1-30	31-84
Heavy Machine Gun*	7X	2	1-36	37-110
Semi-Portable Laser*	11X	1	1-80	81-240
Heavy Semi-Portable Laser*	14X	2	1-100	101-280

Crew Served Weapons

The Crew value indicates how many additional troopers must be nearby to set up or break down the weapon. For example, a semi-portable laser requires one extra trooper to be adjacent to the trooper carrying the weapon during set up or break down. Each trooper involved must use 4 AP to set up or break down a crew served weapon. These additional troopers still carry and use their standard weapons, but they may not fire these weapons while carrying a part of the crew served weapon.

Action	AP Cost
Set up Weapon	4 (per)
Break Down Weapon	4 (per)
Takeover Weapon	6

Crew Served Weapon AP Costs

If the trooper controlling a crew served weapon is killed or abandons the weapon, then any other trooper, friendly or enemy, may take over the crew served weapon. To take over a crew served weapon, a trooper must enter the dot with the weapon and spend 6 AP to switch active weapons.

Crew served weapons set up firing arcs like rifles and pistols; however crew served weapons may only use 60 degree firing arcs. The firing arc direction is established when the weapon is set up, and the weapon must be broken down and set up again to change the firing arc. Fire is resolved the same way as with standard weapons. Crew served weapons are always automatic weapons, so the firing arc is not removed after the firing is resolved.

ADVANCED EXPLOSIVES

Troopers may use several advanced explosive weapons, including explosive launchers, incendiary weapons, and smoke grenades.

Explosive Launchers

Troopers may use the following advanced explosives:

The ammo indicates how many rounds come with the weapon. The damage is given is descending order for the point of detonation, the adjacent dots, the dots 2 away from the detonation, and so on.

Rocket launchers, anti-tank missiles, grenade launchers, auto-grenade launchers, and recoilless rifles are primary weapons. Light anti-tank weapons are secondary weapons.

Weapon	Damage	AP Cost	Ammo	Short Range	Long Range
Light Anti-Tank Weapon	7X/3X/1X	4	1	1-22	23-80
Rocket Launcher	8X/4X/2X	5	2	1-44	45-108
Anti-Tank Missile	13X/6X/3X/1X	5	1	1-54	55-96
Grenade Launcher	4X/2X/1X	3	4	1-10	11-24
Auto-Grenade Launcher	3X/2X/1X	4	4	1-22	23-50
Recoilless Rifle	4X/2X/1X	4	2	1-36	37-70

Advanced Explosive Weapons

A trooper may carry a grenade launcher as a primary weapon or mount a grenade launcher under a rifle or SMG. If mounted under the rifle or SMG, the launcher takes the place of a secondary weapon. A trooper does not have to pay AP to switch between their primary weapon and a launcher. An auto-grenade launcher is a separate weapon and cannot be mounted under a rifle or SMG in this fashion.

In the Other section of the unit card, a trooper may carry extra ammunition, doubling the ammunition available for any explosive weapon.

Advanced explosive weapons resolve in the same way as hand grenades and satchel charges, but these weapons only scatter 1 dot.

Incendiary Weapons

Incendiary weapons are resolved like explosives.

Weapon	Damage	AP Cost	Ammo	Short Range	Long Range
Flamethrower	2X/1X	2	-	1-6	7-12
Heavy Flamethrower	2X/2X/1X	4	4	1-6	7-12
Incendiary Grenade	4X/2X/1X	AP	4	AP	-
Incendiary Rocket	4X/2X/1X	5	2	1-44	45-108

Advanced Explosive Weapons

The ammo indicates how many rounds come with the weapon. A flamethrower has effectively unlimited ammunition. The damage is given is descending order for the point of detonation, the adjacent dots, the dots 2 away from the detonation, and so on.

As with explosives, impassible obstacles, such as a solid high wall or the truck of a tree, block incendiary damage. Solid obstructions such as furniture and windows also block incendiary damage.

All effected dots light on fire after resolving the damage. Fire is an obstruction that is as tall as a trooper and provides cover, like light vegetation. Troopers entering a dot on fire take 1 point of standard damage (X). If a trooper ends their movement on a dot that is on fire, they take 8 points of standard damage (X).

Incendiary grenades are resolved like hand grenades but do incendiary damage, as described above.

Smoke Grenades

Troopers may replace any number of their 4 hand grenades with smoke grenades. Smoke grenades are resolved like hand grenades but create some instead of explosive damage.

After resolving the location the smoke grenade lands, mark the dot where the smoke grenade explodes. This dot and all adjacent dots are filled with smoke. Smoke is an obstruction like light vegetation, but it provides a +3 modifier. At the end of the next movement phase for your side, expand the smoke to cover all dots within 2 of the location where the smoke grenade landed. Smoke stops if it encounters an impassible obstacle, such as a solid high wall. Remove the smoke after 12 turns.

Condition	Modifier
Smoke	+3

To Hit Modifiers

ADVANCED MOVEMENT

Advanced movement includes both additional terrain features, such as water and barbed wire, and a new movement mode, jet packs.

Advanced Terrain

Some maps may offer advanced terrain features that troopers can attempt to navigate.

Movement Type	AP Cost
Change Level	3
Rough	3
Swamp	4
Barbed Wire	6
Climb Wall	5
Enter/Exit Tunnel	2
Enter/Exit Trench	3
Shallow Water	4
Swimming	4

Movement AP Costs

The map may be marked with terrain height, such as with contour lines indicating elevation. It costs 3 AP to change elevation by crossing a contour line.

Rough terrain and swamps slow trooper movement but otherwise function the same way as standard movement. It costs 3 AP to move into a rough dot and 4 AP to move into a swamp dot. Also, swamp counts as an obstruction for the purposes of resolving attacks.

Barbed wire slows trooper movement and may injure or entangle the trooper. It costs 6 AP to enter a dot with barbed wire. When a trooper enters a dot that has barbed wire, apply 1D6 of bludgeoning damage. Then roll 1D6; on a result of 4-6, the trooper is entangled and cannot move further this turn. On the trooper's next turn, roll 1D6 again to apply bludgeoning damage, then roll 1D6 to determine if the trooper remains entangled.

It costs 2 AP to enter or exit a tunnel and 3 AP to enter or exit a trench. Moving through a trench costs standard movement AP; however, a trooper in a tunnel must crawl and movement costs double the standard AP. A trooper in a trench counts as prone when being targeted, but a trooper in a tunnel cannot be seen or targeted by units outside of the tunnel.

Wading through shallow water costs 4 AP but is otherwise like standard movement. Troopers must swim trough deep water. A trooper may swim across water if they are only carrying one weapon. For example, a trooper can only attempt to swim if they are carrying a primary or secondary weapon, but not both. Note that a grenade launcher attached to a rifle or SMG counts as part of the primary weapon and a trooper may swim with a grenade launcher attached to a rifle or SMG.

Swimming troopers may not fire weapons or use explosives. It costs 4 AP to move into a water dot. Explosives do an extra 2 standard damage at each range to targets in water.

Jet Packs

Troopers equipped with jet packs may move further than standard troopers. Jet packs are heavy, and troopers wearing jet packs receive a -2 AP penalty.

Condition	Modifier
Attacker Entangled	+1
Tunnel Combat	+2
Defender Swimming	+1

To Hit Modifiers

It costs 3 AP to activate a jet pack. When activating a jet pack, a trooper must move 6 to 16 dots. A jet pack cannot be used to move fewer than 6 dots, and a jet pack can only be used once in a turn. A jet pack can only be used outdoors or next to a window or door if the trooper immediately goes outside during the flight.

A trooper can go up or down in elevation 1 level for every 3 dots they travel. For example, if a trooper activated a jet pack to move 10 dots, then they can go up or down in elevation by up to 3 levels. A trooper on the ground could land on the roof of a two story building by moving at least 6 dots when activating their jet pack.

Condition	Modifier
Defender Flying	+2

To Hit Modifiers

If a trooper flies through an enemy firing arc, the trooper may be fired upon. Apply a +2 modifier when targeting a flying trooper. If the trooper receives damage that reduces their AP, they immediately fall prone on the ground.

A flying trooper may drop a hand grenade, if they have one ready. The hand grenade may be dropped on any dot the trooper flies over. Use 8 as the base target number and resolve the attack as usual.

A trooper may remove or equip a jet pack for 5 AP, and a jet pack may be exchanged between troopers for 6 AP, like with weapons or ammunition.

ADVANCED COMBAT

There are several optional rules for combat.

Large Targets

Units may target large objects, such as buildings, walls, or vehicles, with explosives. Apply a -2 modifier when attacking a large object.

Condition	Modifier
Large Target	-2

To Hit Modifiers

If the cumulative damage applied to a wall or building exceeds the toughness of the structure, then the structure is breached. Damaged is tracked per dot. The location of the breach becomes rough terrain and costs 3 AP to move into. If using breach rules, the toughness of each building and wall must be identified before the game starts. The default toughness of a building is medium.

Explosives may also be used to target trees. As with buildings, after the tree is destroyed, the terrain becomes rough at that dot and costs 3 AP to move into.

Building	Toughness
Tree	5
Wall	10
Light	15
Medium	40
Heavy	90
Hardened	140

Building Toughness

Trooper Experience

The basic rules assume regular troopers; however, troopers may have different experience levels. More experienced troopers receive extra AP during their turn, but troopers may still only spend a maximum of 8 AP on movement.

Experience	AP Bonus
Green	-1
Regular	0
Veteran	+1
Elite	+2

Experience AP Bonus

Morale Checks

Once 4 or more troopers in a squad have died, the remaining troopers must make morale checks. Each remaining trooper must roll 2D6 and meet the number given in the chart below. Apply a +1 modifier if more than 4 troopers are dead. For example, add a +2 modifier if 6 troopers are dead. Apply a -N modifier based upon the leadership skill of the squad leader, if the squad leader is alive. The standard leadership skill of a squad leader is 2.

Experience	Target
Green	9
Regular	7
Veteran	5
Elite	2

Morale Checks

POWER ARMOR

Infantry troopers can wear power armor in *Skirmishers*. This section relies upon rules from the Advanced Infantry section.

UNIT CARD

The unit card shows the current capabilities of a trooper in power armor and tracks damage. A unit card can be formatted in any way so long as it contains all the essential information. Below is a sample unit card for a power armor trooper.

Trooper: _____ Squad Leader: ___

Number: ____ Skill: _____ Leadership: _____

HP	12	11	10	9	8	7	6	5	4	3	2								DEAD

Secondary Weapon: _____ AP: _____

Damage: _____ Short: _____ Long: _____

Power Armor Trooper Unit Card

There are a few key differences between the standard trooper unit card and a power armor trooper unit card.

Standard power armor has 6 cells of armor. Basic power armor has only 4 cells of armor and heavy power armor has 8 cells of armor. All other cells of armor should be marked off before the game.

Power armor troopers ignore bludgeoning damage (\). However, 9 or more points of bludgeoning damage in a single turn will knock a power armor trooper prone. Standard damage (X) destroys armor before damaging HP cells. If a single attack does more damage than the remaining armor, first mark all remaining armor and then mark HP cells starting with the 12 HP cell.

Once all of the armor has been destroyed, then the trooper's HP cells are marked. Power armor protects the trooper, giving them more HP than a basic trooper. HP cells are fully crossed out when the trooper takes standard damage (X). The current HP of the trooper is given by the first cell to the right of the highest fully marked HP cell. For example, if the trooper has HP 10, 9, and 6 marked off, their current HP is 5. When marking damage, you still roll 2D6 and apply damage starting with the first unmarked HP cell to the right of the rolled value.

The HP cells marked with * indicate significant damage to the power armor. When one of these cells is fully marked, the opponent may choose one of the weapon systems to disable on the power armor suit. When two of these cells have been fully marked, the jet pack on the suit no longer functions.

Total action points (AP) for the trooper are given in the AP section. Power armor greatly extends the capabilities of troopers, giving them more AP. Use the value in the column corresponding to the trooper's current HP. For example, if the trooper has 5 HP, then they have only 10 AP.

As with standard troopers, green troopers in power armor reduce all of their AP values by 1, while veteran troopers increase all values by 1 and elite troopers increase all values by 2.

Similarly, the modifier section tracks the current modifier for the trooper's target numbers based upon current HP. For example, if the trooper has 5 HP, then add +1 to all target numbers.

Basic and standard power armor comes equipped with a jet pack. Heavy power armor is too bulky to use a jet pack.

The weapons and equipment section list the primary and secondary weapons the trooper is equipped with, along with their damage values and range brackets. Power armor troopers cannot use grenades but may use satchel changes.

The leadership section lists the squad leader for the trooper and their leadership score. This section contains the information required for morale checks.

WEAPONS AND EQUIPMENT

Standard and heavy power armor troopers have two primary weapons and one secondary weapon. Basic power armor troopers have one primary weapon and one secondary weapon.

Primary Weapons

Power armor troopers may use the following primary weapons:

Weapon	Damage	AP Cost	Ammo	Short Range	Long Range
Machine Gun*	6X	-	-	1-30	31-84
Small Laser	12X	-	-	1-90	91-270
Flamethrower	8X/4X/2X	4	-	1-10	11-20
Anti-Tank Missile	13X/6X/3X/1X	5	2	1-54	55-96

Primary Weapons

Note, the machine gun can fire into the same firing arc multiple times. All other weapons may only fire into a firing arc once per turn.

Any standard infantry weapons may be used as a secondary weapon for power armor troopers.

MOVEMENT

As with basic troopers, power armor troopers may spend a maximum of 8 AP on movement.

Power armor troopers can activate their jet pack at a cost of 0 AP but can still only activate their jet pack once per turn. The trooper still must fly at least 6 dots but may fly no more than 16 dots.

Barbed wire does not effect power armor troopers. Power armor troopers cannot be entangled by barbed wire and only pay 1 AP to enter a dot with barbed wire.

COMBAT

Power armor troopers largely use the same rules as standard troopers.

Firing Arcs

Power armor troopers may place firing arcs for all of their weapons. If a weapon does not have a firing arc, then that weapon cannot fire. If one of a power armor trooper's weapons is an explosive, this trooper may use the explosive and establish firing arcs with their other weapons.

Hand to Hand Combat

It costs 5 AP to make a hand to hand attack. Power armor trooper fists are more effective at dealing damage.

Weapon	Damage	Short Range	Long Range
Fists	1X, (AP/2)\	1	-

Power Armor Hand to Hand

Explosives

Power armor troopers may use explosive weapons, but may not use hand grenades or smoke grenades. Power armor troopers may pick up and use satchel charges.
